# Introductory note

### This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

The facility disposes of waste oils which are collected from a range of clients by road tanker and offloaded into bulk storage tanks; and also operates waste transfer activities as introduced by this variation.

This variation authorises the acceptance and storage on site of additional waste types in drums and other demountable containers, for onward transfer for disposal or recovery elsewhere. This increases permitted storage capacity of waste in containers by 250 tonnes, to a total of 750 tonnes.

This variation authorises the storage of up to 20,000 tonnes per annum of hazardous waste, and up to 5,000 tonnes per annum of non-hazardous waste, for manual sorting and separation, bulking into homogenised loads, repackaging and transfer to a single off-site disposal or recovery point.

Loads of waste are off-loaded into the bunded off-loading / loading and reception area on an impervious surface. Following compatibility testing, wastes are segregated accordingly and bulked into larger (up to 1 tonne) containers held within 7 separately bunded storage bays. Consolidated loads of waste for onward transfer may be stored for up to 6 months pending the assembly of loads for despatch off site.

This variation to receive additional waste types for transfer will not increase emissions to air or water.

The operator has now added a biological remediation treatment plant to the existing effluent treatment system. This system provides additional treatment to the process effluent and surface water prior to discharge to sewer. Emissions to air from the plant are abated using carbon scrubbers.

There are no Sites of Special Scientific Interest within 2km of the installation and one candidate Special Area of Conservation (cSAC), the Cannock Extension Canal, located approximately 6.4 km from the installation. The impact on these, and local nature reserves, is not significant and has not changed as a result of this variation.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
